

Abstract.

The invention relates to a container (1) comprising a cup-type compartment (2) having an opening (3) and comprising a cover (4) to be  
5 placed on said opening (3), said cover (4) having an inner component (5) and an outer component (6) detachably connected to said inner component (5), between said inner component (5) and  
10 said outer component (6) connected to the inner component (5) a cavity (7) being formed for receiving one object (8) or more objects (8), said cavity (7) comprising two main surfaces (9, 10) being parallel to one another. It is characterized  
15 ized by that the two main surfaces (9, 10) of the cavity (7) are at an angle of  $0^\circ < \alpha < 90^\circ$  to an opening plane (11) formed by the opening (3).
